

# Guide to Selecting the Correct ClipConnector for Flexible Cable Wiring

Please contact **yokowo DS** with any questions or issues related to flexible cable inspections. We will guide you through the process of selecting the clip connector ideally suited to your flexible cable inspection needs.

From the product series listed below, we will select a clip connector best-suited for your flexible cable inspections.

Please complete the Clip Connector Inquiry Sheet on page 48 to indicate the tip shape and size of the flexible cable and the distance from the flexible cable to the obstruction or impediment.

To determine what information you need to provide in the submitted diagrams, please see pages 44 and 45.

Pitch	Configuration of the flexible cable to be inspected	The guide unit will be processed each time an order is received to suit the flexible cable in question.						This series is designed for use with flexible cables having straight tip portions of 11 mm or longer.	
	Features	Compact clip connectors whose width is processed each time an order is received for use with a specific number of pins; designed for easy handling and to enable easy inspection in cases where flexible cables are adjacent or obstructions or impediments are present near the flexible cable (except for some clip connectors)		Clip connectors individually processed for compatibility, even with irregularly configured 0.3 mm and 0.5 mm pitch, multiple-pin flexible cables		Clip connectors individually processed for compatibility, even with irregularly configured flexible cables; deliverable in a mere three days		Low-cost, standard clip connectors with same-day shipping	
	Lead times from Japan	4 days		3 days (4 days for CCSE-050X)		3 days		Same day
